## Homework 37: multivariable functions

Print and attach your Mathematica work; label each part with the associated problem and part numbers to make it easier for the grader to find your work.
(1) Plot the function $z(x, y)=x^{3}+1$ by hand. Label your axes (as in the plural of axis, not the plural of $a x$ ). [Hint: start with a $2 D$ plot, then go to $3 D$.]

## Always label your axes

(2) Consider the function $f(x, y)=x^{2}+(y-1)^{2}$.
(a) On a single graph, draw (by hand) the slices with $x$ fixed at $x=-1,0$, and 1 . Label the axes and graphs appropriately (same for part (b) below).
(b) On a single graph, draw (by hand) the slices with $y$ fixed at $y=-1,0$, and 1 .
(c) Plot the graph of $f(x, y)$ on Mathematica using both ContourPlot and Plot3D. Change the ViewPoint to get different views of the plot. Explain how your hand-drawn graphs agree with your Mathematica-drawn plots.
(3) Consider a vibrating guitar string. The displacement of the string from its resting position is given by

$$
g(x, t)=\cos 2 t \sin x
$$

where $0 \leq t \leq \pi$ is time in milliseconds and $0 \leq x \leq \pi$ is the distance from the end of the string. Do all of the steps below using Mathematica to come to an understanding of the shape of the graph.
(a) Plot, on a single Plot, the slices when $x=0, \pi / 4$, and $\pi / 2$. Label the slices by hand or use Mathematica's drawing tools (same for part (b) below).
(b) Plot, on a single Plot, the slices when $t=0, \pi / 2$, and $\pi$.
(c) Plot with ContourPlot and Plot3D.
