Preface	xiii
Acknowledgments	xx
To The Student	xxii
1 Introduction	1
1.1 What Is Discrete Mathematics?	1
1.1.1 A Break from the Past	3
1.2 The Stable Marriage Problem	3
1.2.1 Seeking a Solution	4
1.2.2 The Deferred Acceptance Algorithm	5
1.2.3 Some Concluding Comments	7
1.3 Other Examples	7
1.3.1 A Simple Counting and Probability Example	7
1.3.2 Sierpinski Curves	8
1.3.3 The Bridges of Königsberg	9
1.3.4 Kirkman’s Schoolgirls	9
1.3.5 Finite-State Machines	10
1.3.6 The Set of Rational Numbers is Countably Infinite	11
1.4 Exercises	13
1.5 Chapter Review	15
1.5.1 Summary	15
1.5.2 Notation	15
2 Sets, Logic, and Boolean Algebras	17
2.1 Sets	19
2.1.1 Definitions and Notation	19
2.1.2 Exercises	26
2.1.3 Proofs about Sets	29
2.1.4 Exercises	33
2.2 Logic in Daily Life	34
2.2.1 General Guidelines for Analyzing Claims	34
2.2.2 Informal Fallacies	35
2.2.3 Everyday Logic versus Symbolic Logic	37
2.2.4 Exercises	37
2.3 Propositional Logic	38
2.3.1 Truth Tables	39
2.3.2 The Operators NOT, AND, OR, and XOR	39
2.3.3 Negations of AND, OR, and NOT	40
2.3.4 Exercises	42
2.3.5 Implication and the Biconditional	43
2.3.6 Operator Precedence	46
2.3.7 Logical Equivalence	46
2.3.8 Derived Implications	47
2.3.9 Exercises	48

2.4	Logical Equivalence and Rules of Inference	50
2.4.1	Important Logical Equivalences and Rules of Inference	53
2.4.2	Proving that a Statement is a Tautology	54
2.4.3	Exercises	56
2.5	Boolean Algebras	58
2.5.1	Sets and Propositions as Boolean Algebras	60
2.5.2	Proving Additional Boolean Algebra Properties	63
2.5.3	Exercises	67
2.6	Predicate Logic	68
2.6.1	Quantifiers	69
2.6.2	Exercises	74
2.7	Quick Check Solutions	76
2.8	Chapter Review	81
2.8.1	Summary	81
2.8.2	Notation	82
2.8.3	Fundamental Properties	83
2.8.4	Additional Review Material	84
3	Proof	85
3.1	Introduction to Mathematical Proof	85
3.1.1	Mathematics and Proof: The Big Picture	86
3.1.2	Mathematical Objects Related to Proofs	87
3.1.3	Exercises	91
3.2	Elementary Number Theory: Fuel for Practice	92
3.2.1	The Integers and Other Number Systems	92
3.2.2	Divisibility	93
3.2.3	Primes	95
3.2.4	The Well-Ordering Principle	96
3.2.5	Congruence, Factorials, Floor and Ceiling Functions	98
3.2.6	Exercises	99
3.3	Proof Strategies	100
3.3.1	Trivial Proof	100
3.3.2	Direct Proof	101
3.3.3	Indirect Proof: Proving the Contrapositive	103
3.3.4	Proof by Contradiction	103
3.3.5	Proof by Cases	105
3.3.6	Implications with Existential Quantifiers	105
3.3.7	Implications with Universal Quantifiers	106
3.3.8	Proofs Involving the Biconditional and Logical Equivalence	108
3.3.9	Some Important Examples	109
3.3.10	Exercises	111
3.4	Applications of Elementary Number Theory	113
3.4.1	The Euclidean Algorithm: Calculating $\gcd(a, b)$	113
3.4.2	Hashing	116
3.4.3	Pseudorandom Numbers	117
3.4.4	Linear Congruence and the Chinese Remainder Theorem	119
3.4.5	Fermat's Little Theorem and Fermat's Last Theorem	124
3.4.6	Encryption	126
3.4.7	Exercises	130

3.5	Mathematical Induction	132
3.5.1	The Principle of Mathematical Induction	132
3.5.2	Complete Induction	139
3.5.3	Interesting Mathematical Induction Problems	141
3.5.4	The Well-Ordering Principle, Mathematical Induction, and Complete Induction	146
3.5.5	Multidimensional Induction	148
3.5.6	Exercises	151
3.6	Creating Proofs: Hints and Suggestions	153
3.6.1	A Few Very General Suggestions	153
3.6.2	Some Specific Tactics	156
3.6.3	Exercises	161
3.7	Quick Check Solutions	162
3.8	Chapter Review	167
3.8.1	Summary	167
3.8.2	Notation	168
3.8.3	Additional Review Material	168
4	Algorithms	169
4.1	Expressing Algorithms	170
4.1.1	Flow of Control	170
4.1.2	Flow of Information	176
4.1.3	Exercises	179
4.2	Measuring Algorithm Efficiency	180
4.2.1	Big- Θ and Its Cousins	181
4.2.2	Practical Big- Θ Tools	185
4.2.3	Exercises	193
4.2.4	Big- Θ in Action: Searching a List	195
4.2.5	Exercises	200
4.3	Pattern Matching	202
4.3.1	The Obvious Algorithm	202
4.3.2	KMP: Knuth–Morris–Pratt	204
4.3.3	BM: Boyer–Moore	206
4.3.4	Exercises	213
4.4	The Halting Problem	214
4.4.1	Setting the Stage	214
4.4.2	The Halting Problem	215
4.5	Quick Check Solutions	217
4.6	Chapter Review	222
4.6.1	Summary	222
4.6.2	Notation	223
4.6.3	Big- Θ Shortcuts	224
4.6.4	Additional Review Material	224
5	Counting	225
5.1	Permutations and Combinations	226
5.1.1	Two Basic Counting Principles	226
5.1.2	Permutations	229
5.1.3	Permutations with Repetition	231
5.1.4	Combinations	231
5.1.5	Combinations with Repetition	234
5.1.6	Exercises	237
5.1.7	More Complex Counting Problems	239
5.1.8	Exercises	246

5.2	Combinatorial Proofs	248
5.2.1	Introduction to Combinatorial Proofs	248
5.2.2	Counting Tulips: Three Combinatorial Proofs	251
5.2.3	Exercises	257
5.3	Pigeon-Hole Principle; Inclusion–Exclusion	258
5.3.1	The Pigeon-Hole Principle	258
5.3.2	Inclusion–Exclusion	261
5.3.3	Exercises	264
5.4	Quick Check Solutions	266
5.5	Chapter Review	270
5.5.1	Summary	270
5.5.2	Notation	271
5.5.3	Some Counting Formulas	272
5.5.4	Additional Review Material	272
6	Finite Probability Theory	273
6.1	The Language of Probabilities	274
6.1.1	Sample Spaces, Outcomes, and Events	274
6.1.2	Probabilities of Events	277
6.1.3	Exercises	281
6.2	Conditional Probabilities and Independent Events	283
6.2.1	Definitions	283
6.2.2	Computing Probabilities	287
6.2.3	Exercises	294
6.3	Counting and Probability	297
6.3.1	Exercises	299
6.4	Expected Value	302
6.4.1	Exercises	308
6.5	The Binomial Distribution	310
6.5.1	Exercises	315
6.6	Bayes’s Theorem	316
6.6.1	Exercises	319
6.7	Quick Check Solutions	322
6.8	Chapter Review	327
6.8.1	Summary	327
6.8.2	Notation	328
6.8.3	Additional Review Material	328
7	Recursion	329
7.1	Recursive Algorithms	332
7.1.1	General Guidelines for Creating Recursive Algorithms	333
7.1.2	A Detailed Example	334
7.1.3	When Should Recursion Be Avoided?	336
7.1.4	Persian Rugs	339
7.1.5	Drawing Sierpinski Curves	342
7.1.6	Adaptive Quadrature	345
7.1.7	Exercises	349
7.2	Recurrence Relations	350
7.2.1	Solving Recurrence Relations	353
7.2.2	Linear Homogeneous Recurrence Relations with Constant Coefficients	357
7.2.3	Repeated Roots	366
7.2.4	The Sordid Truth	373
7.2.5	Exercises	375
7.3	Big- Θ and Recursive Algorithms: The Master Theorem	377
7.3.1	Exercises	389

7.4	Generating Functions	391
7.4.1	Exercises	401
7.5	The Josephus Problem	402
7.5.1	Exercises	407
7.6	Quick Check Solutions	407
7.7	Chapter Review	414
7.7.1	Summary	414
7.7.2	Notation	416
7.7.3	Generating Function Table	416
7.7.4	Additional Review Material	416
8	Combinatorics	417
8.1	Partitions, Occupancy Problems, Stirling Numbers	419
8.1.1	Partitions of a Positive Integer	419
8.1.2	Occupancy Problems	423
8.1.3	Stirling Numbers	427
8.1.4	Exercises	433
8.2	Latin Squares; Finite Projective Planes	435
8.2.1	Latin Squares	435
8.2.2	Finite Projective Planes	442
8.2.3	Finite Projective Planes and Latin Squares	447
8.2.4	Exercises	457
8.3	Balanced Incomplete Block Designs	460
8.3.1	Constructing Balanced Incomplete Block Designs	464
8.3.2	Exercises	471
8.4	The Knapsack Problem	472
8.4.1	Exercises	485
8.5	Error-Correcting Codes	488
8.5.1	The 7-Bit Hamming Code	489
8.5.2	A Formal Look at Coding Theory	492
8.5.3	Combinatorial Aspects of Coding Theory	497
8.5.4	Exercises	500
8.6	Distinct Representatives, Ramsey Numbers	502
8.6.1	Systems of Distinct Representatives	502
8.6.2	Ramsey Numbers	509
8.6.3	Exercises	516
8.7	Quick Check Solutions	518
8.8	Chapter Review	529
8.8.1	Summary	529
8.8.2	Notation	530
8.8.3	The Fano Plane	531
8.8.4	Occupancy Problems	531
8.8.5	Additional Review Material	532
9	Formal Models in Computer Science	533
9.1	Information	533
9.1.1	A General Model of Communication	534
9.1.2	A Mathematical Definition of Information	535
9.1.3	A Summary of Other Ideas in Shannon's Paper	540
9.1.4	Exercises	541
9.2	Finite-State Machines	542
9.2.1	Finite Automata	543
9.2.2	Finite-State Machines with Output	547
9.2.3	Exercises	551

9.3	Formal Languages	553
9.3.1	Regular Grammars	554
9.3.2	Exercises	559
9.4	Regular Expressions	560
9.4.1	Introduction to Regular Expressions	560
9.4.2	Perl Extensions	566
9.4.3	Exercises	568
9.5	The Three Faces of Regular	569
9.5.1	Optional: Completing the Proof of Kleene's Theorem	576
9.5.2	Exercises	582
9.6	A Glimpse at More Advanced Topics	584
9.6.1	Context-Free Languages and Grammars	584
9.6.2	Turing Machines	585
9.6.3	Exercises	590
9.7	Quick Check Solutions	591
9.8	Chapter Review	596
9.8.1	Summary	596
9.8.2	Notation	597
9.8.3	Additional Review Material	598

10 Graphs 599

10.1	Terminology	600
10.1.1	New Graphs from Old	603
10.1.2	Special Graph Families	605
10.1.3	Exercises	608
10.2	Connectivity and Adjacency	609
10.2.1	Connectivity	609
10.2.2	The Adjacency Matrix	613
10.2.3	Exercises	615
10.3	Euler and Hamilton	618
10.3.1	Euler Circuits and Euler Trails	618
10.3.2	Hamilton Cycles and Hamilton Paths	620
10.3.3	Exercises	624
10.4	Representation and Isomorphism	626
10.4.1	Representation	626
10.4.2	Isomorphism	629
10.4.3	Exercises	631
10.5	The Big Theorems: Planarity, Euler, Polyhedra, Chromatic Number	634
10.5.1	Planarity	634
10.5.2	The Regular Polyhedra	639
10.5.3	Chromatic Number	642
10.5.4	Exercises	648
10.6	Directed Graphs and Weighted Graphs	651
10.6.1	Directed Graphs	651
10.6.2	Weighted Graphs and Shortest Paths	655
10.6.3	Exercises	662
10.7	Quick Check Solutions	665
10.8	Chapter Review	670
10.8.1	Summary	670
10.8.2	Notation	671
10.8.3	Additional Review Material	671

11	Trees	673
11.1	Terminology, Counting	673
11.1.1	Exercises	680
11.2	Traversal, Searching, and Sorting	682
11.2.1	Traversing Binary Trees	682
11.2.2	Binary Search Trees	685
11.2.3	Sorting	689
11.2.4	Exercises	690
11.3	More Applications of Trees	692
11.3.1	Parse Trees	692
11.3.2	Huffman Compression	694
11.3.3	XML	699
11.3.4	Exercises	708
11.4	Spanning Trees	711
11.4.1	Spanning Trees in Unweighted Graphs	711
11.4.2	Minimal Spanning Trees in Weighted Graphs	717
11.4.3	Exercises	722
11.5	Quick Check Solutions	726
11.6	Chapter Review	729
11.6.1	Summary	729
11.6.2	Notation	729
11.6.3	Additional Review Material	730
12	Functions, Relations, Databases, and Circuits	731
12.1	Functions and Relations	731
12.1.1	Functions	731
12.1.2	Relations	735
12.1.3	Exercises	737
12.2	Equivalence Relations, Partially Ordered Sets	739
12.2.1	Properties that Characterize Relations	739
12.2.2	Equivalence Relations and Partitions	742
12.2.3	Exercises	746
12.3	n -ary Relations and Relational Databases	748
12.3.1	n -ary Relations	748
12.3.2	Relational Databases	749
12.3.3	Functional Dependence; Models and Instances	751
12.3.4	Keys; Operations on Relations	752
12.3.5	Normal Forms	757
12.3.6	Exercises	769
12.4	Boolean Functions and Boolean Expressions	772
12.4.1	Boolean Functions	773
12.4.2	Binary Functions and Disjunctive Normal Form	775
12.4.3	Binary Expressions and Disjunctive Normal Form	778
12.4.4	Exercises	784
12.5	Combinatorial Circuits	785
12.5.1	Minimizing Binary Expressions	785
12.5.2	Combinatorial Circuits and Binary Expressions	789
12.5.3	Functional Completeness	793
12.5.4	Exercises	795
12.6	Quick Check Solutions	797
12.7	Chapter Review	804
12.7.1	Summary	804
12.7.2	Notation	805
12.7.3	Additional Review Material	805

A	Number Systems	A1
A.1	The Natural Numbers	A1
A.2	The Integers	A2
A.3	The Rational Numbers	A2
A.4	The Real Numbers	A4
A.5	The Complex Numbers	A4
A.6	Other Number Systems	A6
A.7	Representation of Numbers	A7
B	Summation Notation	A10
C	Logic Puzzles and Analyzing Claims	A12
C.1	Logic Puzzles	A12
C.1.1	Logic Puzzles about AND, OR, NOT	A12
C.1.2	Logic Puzzles about Implication, Biconditional, and Equivalence	A16
C.1.3	Exercises	A18
C.2	Analyzing Claims	A18
C.2.1	Analyzing Claims that Contain Implications	A18
C.2.2	Analyzing Claims that Contain Quantifiers	A22
C.2.3	Exercises	A23
C.3	Quick Check Solutions	A24
D	The Golden Ratio	A27
E	Matrices	A29
F	The Greek Alphabet	A33
G	Writing Mathematics	A34
H	Solutions to Selected Exercises	A36
H.1	Introduction	A36
H.2	Sets, Logic, and Boolean Algebras	A36
H.3	Proof	A42
H.4	Algorithms	A47
H.5	Counting	A51
H.6	Finite Probability Theory	A54
H.7	Recursion	A59
H.8	Combinatorics	A63
H.9	Formal Models in Computer Science	A68
H.10	Graphs	A71
H.11	Trees	A75
H.12	Functions, Relations, Databases, and Circuits	A78
H.13	Appendices	A83
	Bibliography	A85
	Index	A90
